A. THE EMPLOYMENT PENSIONS BRANCH

INTRODUCTION

The Employment Pensions Branch is pleased to present the second annual statistical report on the status of registered pension plans in Alberta. The report is designed to provide the reader with information on various features of the private pension system both in terms of branch activity and the types of plans being registered, and the funding of those plans.

The report is divided into two Sections. The first section provides a brief description of the programs of the Employment Pensions Branch and an overview of branch activity historically and over the past year specifically. The second section examines the plans registered with the branch and covers such areas as plan membership and types of plans. Features such as vesting, funding and solvency, and actuarial assumptions being used in defined benefit plans are also covered in the second section.

The structure of the report is a combination of commentary, tables and graphs, with some additional tables appended at the end of the report.

The information presented is based on the data received from plan sponsors and tabulated by the branch. The data used is as of March 31, 1990.

RECIPROCAL AGREEMENTS

As authorized by section 3 of the *Employment Pensions Branch Act*, the Alberta government is a party to two agreements with the Government of Canada and one with three other provinces which have agreements similar to Alberta's. Such agreements provide for the reciprocal regulation, audit and inspection of pension plans. Under these agreements, a pension plan subject to the regulation of more than one authority is supervised by that authority having jurisdiction over the greatest number of plan members. This means that the branch carries out the duties and responsibilities of other pension jurisdictions in cases where reciprocal agreements apply, including the administration of the legislation of those other jurisdictions.

THE LABOUR RELATIONS CODE

The branch is also the repository for trust agreements related to employee benefit plans filed under section 154 of the *Labour Relations Code*. These trust agreements and amendments are in force on payment, acknowledgement or reconsideration with regard to the intent and purpose of the agreement.

With respect to trust agreements that have been submitted as authorized by a collective agreement and filed with the Minister of Labour, section 154 of the *Labour Relations Code* provides that a trustee is not personally liable for his or her actions as a trustee, unless it can be shown that the trustee failed to act honestly or did not act in accordance with the purpose and intent of the trust agreement.

A. THE EMPLOYMENT PENSIONS BRANCH

1. ROLES AND RESPONSIBILITIES

ADMINISTRATION OF THE ACT

The Employment Pensions Branch of Alberta Labour is responsible for the administration and enforcement of the Employment Pension Plans Act, which came into force on January 1, 1987, replacing the Pension Benefits Act which was effective January 1, 1967. The principal objective of the Act is to safeguard employee entitlements to benefits promised under private sector pension plans.

With the exception of certain exempted pension plans identified under section 41(1) of the Employment Pension Plans Regulation, the Act requires that every pension plan covering employees in Alberta be registered with the branch in order to ensure that each plan complies with the terms and conditions of the Act throughout its' lifetime.

In accordance with the Act, the branch may refuse to register pension plans that do not qualify and may cancel Certificates of Registration previously issued. Branch staff monitor pension plans to ensure that they are administered correctly and that pension plan funds are sufficient to cover earned benefits.

RECIPROCAL AGREEMENTS

As authorized by section 3 of the Employment Pension Plans Act, the Alberta government is a party to two agreements, one with the Government of Canada, and one with those other provinces which have legislation similar to Alberta's Act. Both agreements provide for the reciprocal registration, audit and inspection of pension plans. Under these agreements, a pension plan subject to the legislation of more than one authority is supervised by that authority having jurisdiction over the greatest number of plan members. This means that the branch carries out the duties and responsibilities of other pension jurisdictions in cases where reciprocal agreements apply, including the administration of the legislation of those other jurisdictions.

THE LABOUR RELATIONS CODE

The branch is also the repository for trust agreements relative to employee benefit plans filed under section 154 of the Labour Relations Code. Filed trust agreements and amendments are reviewed for possible inadequacies or inconsistencies with regard to the intent and purpose of the agreement.

With respect to trust agreements that have been authorized or sanctioned by a collective agreement and filed with the Minister of Labour, section 154 of the Labour Relations Code provides that a trustee is not personally liable for his or her actions as a trustee, unless it can be proven that the trustee failed to act honestly or did not act in accordance with the purpose and intent of the trust agreement.

2. REGULATION OF PLANS

PLANS SUPERVISED

As of March 31, 1990, the branch was responsible for the supervision of 1 700 pension plans, 1 561 of which had received registered status, and 139 of which had been reviewed and were awaiting further documentation before being registered under the Employment Pension Plans Act. These plans covered a total of 288 261 active plan members, and 78 161 former members entitled to benefits. The majority of pending plans were one person executive plans which had not yet received acceptance by Revenue Canada Taxation.

Except as otherwise noted, Tables I and II, on page 6, provide an overview of branch activity from its' inception in 1967 to March 31, 1990. The first column in each table provides totals up to the previous fiscal year under review and column three provides the total to the end of the 1989-90 fiscal year.

Graphs 1 and 2, on page 7, chart branch activity from January 1, 1967 to March 31, 1990 in terms of plans approved and discontinued (Graph 1), and plans supervised (Graph 2). As can be seen, peak periods for both registration of plans and plans supervised were in 1968, when plans were first being registered with the branch, and in 1986, when there were a large number of plans filed which related solely to significant shareholders. Discontinuances peaked in 1971 and have remained relatively constant since, with a slight increase occurring in recent years. This recent increase in the number of plan discontinuances relates mostly to the discontinuance of plans for significant shareholders.

REGISTRATIONS

As outlined in Table I, there were 138 new pension plans examined during the 1989-90 fiscal year. Of these, 129 plans were actually registered. Nine plans were not approved for registration by Revenue Canada Taxation and the plan sponsors decided not to proceed with establishing these plans.

TRANSFERS

Under reciprocal agreements entered into with other governments, three plans were transferred to Alberta and two were transferred from Alberta to other jurisdictions.

DISCONTINUANCES

There were 216 pension plans that were discontinued and had their Certificates of Registration cancelled during the year under review. These discontinued plans covered 2 016 members. One hundred and fifty four, or 71 percent of these plans, covering 243 members, were significant shareholder or executive plans. Eighteen plans, covering 512 members, were discontinued because they merged with other existing pension plans and the members had their benefits transferred to those other registered pension plans. Forty plans, covering 486 members, were discontinued because the company was dissolved or because of financial problems. Fifteen plans, covering 306 members were discontinued at the request of the plan sponsor. There were 106 discontinued plans, covering 687 members, which were replaced by registered retirement savings plans, and 23 plans discontinued because the last member had terminated or retired. Five plans, covering only seven members, were discontinued by the branch for non-compliance with the Employment Pension Plans Act. Table II

outlines the reasons for discontinuance and shows the member breakdown. In the past three years, ending March 31, 1990, 533 plans, covering 3 099 members, have been replaced by registered retirement savings plans.

OTHER ACTIVITIES

The branch also approved 1 182 amendments to registered pension plans during the fiscal year. Again this year there were a large number of amendments related to changes required to bring plans into compliance with the Employment Pension Plans Act, and other provincial and federal pension legislation. There were 1 587 Annual Information Returns and 148 Cost Certificates reviewed and accepted for purposes of the Act.

Table I
Regulatory Activities of the
Branch for the Year Ended March 31, 1990

	Total at March 31, 1989 *	Change During Year	Total at March 31, 1990 *
Plans Examined	4 594	138	4 732
Plans Approved for Registration	4 489	129	4 618
Plans Transferred to Alberta Supervision	161	3	164
Plans Transferred from Alberta Supervision	171	2	173
Plans Discontinued (Registration Cancelled)	2 949	216	3 165
Amendments to "Approved" Plans	14 516	1 182	15 698
Annual Information Returns **	30 861	1 587	32 448
Cost Certificates ***	9 394	148	9 542

* These columns show totals since January 1, 1967.

** An Annual Information Return is submitted in respect of every pension plan and provides data regarding contributions to the plan, plan membership, terminations and retirements.

*** A Cost Certificate is submitted for each pension plan with a defined benefit provision on at least a triennial basis or when plan changes affecting the funding and solvency of the plan occur. The Cost Certificate provides data regarding the liabilities and assets of the plan and describes the contributions required to fund the benefits provided under the plan.

B. PLANS SUPERVISED BY THE BRANCH

1. PLAN FUNDS

Tables III and IV, on page 9, deal with monies going into and out of pension plans during the 1989-90 fiscal year. Table III outlines the contributions made during the year. Table IV outlines surplus refunds, for which notice was given as is required by section 58(c) of the Act, during the year under review and provides a historical overview of surplus refunds to employers from 1982 onward.

CONTRIBUTIONS

The total amount required to be contributed to plans in the 1989-90 year, was \$439 million. This amount included employee required contributions, employee voluntary contributions, employer current service contributions and employer special payments. Approximately \$104 million in required employer current service contributions were offset by the use of existing surplus assets. This \$104 million represented about 35 percent of required employer current service contributions. About \$335 million was actually contributed to pension plans during the year under review.

Employee required contributions amounted to about \$44.8 million, with an additional \$7.2 million being contributed as employee voluntary contributions. This compares with employee required contributions of about \$42.7 million and voluntary contributions of about \$7.3 million in the 1988-89 fiscal year.

The remaining \$283 million in actual contributions were employer contributions for current service and special payments. This compares to actual employer contributions totalling \$224 million in the 1988-89 fiscal year. There was a significant increase in special payments over last year's figures, \$18 million in 1988-89 versus \$90 million in 1989-90. This related mostly to a higher level of amortization payments for unfunded liabilities.

SURPLUS REFUNDS

Surplus monies amounting to \$5.8 million were refunded by trustees of pension plans to plan sponsors. Of this, \$250 000 went to two plan sponsors as ongoing surplus refunds, and \$5.55 million went to 19 employers on termination of their pension plans. An additional \$1.4 million in surplus was provided to pension plan members on termination of their pension plans in the form of additional benefits. Table IV outlines the amounts refunded in 1989-90 and shows the level of surplus refunds to employers from April 1, 1982, to December 31, 1986 and then from January 1, 1987 to March 31, 1990.

2. PLAN INFORMATION

ACTIVE MEMBERS

The 1 700 pension plans supervised by the branch covered 288 261 active members. Three of these plans, or 0.18 percent of plans registered, covered 52 percent of all active members. Two of these three plans were multi-employer negotiated plans covering 141 489 members, or 50 percent of all active members. On the other hand, 59 percent of the plans supervised by the branch covered only one percent of all active members. The bulk of these plans were one to three person shareholder and executive pension plans.

Outside of these two extremes, the majority of plans covered between 11 and 400 active members, with the average active membership being about 70 members. Table V, on page 12, provides a full breakdown of plans by membership size.

JURISDICTIONS

Table VI, on page 13, lists the number of plans that had active members in each jurisdiction. It should be noted that there is some overlap of plans as some plans had members in several jurisdictions. Forty-six percent of active members were employed in Alberta, and 24 percent were employed in British Columbia. The remaining 30 percent, were employed in the various other provinces and territories and some locations outside Canada. This table also illustrates the breakdown of membership by jurisdiction.

BENEFIT TYPE

Defined contribution plans accounted for 64 percent of the pension plans registered with the branch, however these plans covered only nine percent of active members. Flat benefit plans represented only five percent of the total plans registered, but they covered 61 percent of active members. Again these two extremes can be accounted for by the fact that the majority of defined contribution plans were shareholder and executive pension plans or plans for small employers, and the flat benefit plans were almost all large multi-employer plans.

Table VII, on page 14, provides data on benefit types both from the view of percentage of plans and active membership. Excluding the two extremes noted above, we can see that the most common plan for an average size employer was the defined benefit plan, and that majority of the active members of these plans were covered by average best earnings plans.

FORMER MEMBERS

As of March 31, 1990, there were 78 161 former members of pension plans with defined benefit provisions who were entitled to benefits from pension plans under which they had ceased active participation. Of these, 36 360 were pensioners or beneficiaries who were receiving benefits from the plan, and 41 801 were vested former members entitled to benefits at retirement. The average number of pensioners and vested former members per plan was approximately 70 and 80 respectively. Table VIII, on page 15, illustrates membership status by plan type. Defined contribution plans were assumed to have only active members, as these plans never provide payments from the plan and no data is available regarding the number of former members still entitled to benefits under these plans.

VESTING

Of the 1 561 plans approved for registration as of March 31, 1990, 48 percent had the Act minimum, of five years of employment, as their vesting rule for future benefit accruals. These plans covered 91 percent of active members. The remaining nine percent of active members, covered by 52 percent of plans registered, were vested between zero and four years of service, with the majority, or one third, of these members being vested after two years of service. Table IX, on page 16, illustrates the vesting provisions of plans registered, in terms of both number of plans and number of members.

Table V
Active Membership of Plans
Supervised by the Branch
For the Year Ended March 31, 1990

3. FUNDING AND SOLVENCY

ASSETS

The market value of the assets of the pension plans registered with the branch as of March 31, 1990 was close to \$6.3 billion. Of this, about \$368 million was attributable to defined contribution plans and \$5.9 billion was attributable to defined benefit plans.

This amounted to approximately \$15 396 for each member of a defined contribution plan and \$17 305 for each member and former member of a defined benefit plan.

The average assets per plan was \$349 674 for defined contribution plans and \$11.6 million for defined benefit plans. As can be seen from Table X, on page 20, while the average assets per plan differs significantly from defined contribution to defined benefit, the difference in average assets per member is not very large. Again this can be explained by the two extremes, the few large defined benefit plans versus the large number of one or two person defined contribution plans. The latter case in particular, where individuals are contributing the maximum tax deductible amount each year, has had an effect on the average assets per member for defined contribution plans.

Table X gives a breakdown of total assets and average assets by plan type. It should be noted that this table and Table XI, on page 21, exclude the 139 plans, covering 3 613 members, which had been reviewed but were awaiting further documentation. These 139 plans were largely executive and shareholder plans which had not yet received Revenue Canada Taxation approval and were, therefore, delaying registration under the Employment Pension Plans Act. The tables do, however, include those newly registered plans which had no assets and no liabilities.

The remainder of the report commentary relates solely to plans which have defined benefit provisions, hereinafter referred to as defined benefit plans.

LIABILITIES

The going concern liabilities for defined benefit plans totalled about \$5.9 billion as of March 31, 1990. This amounted to an average of \$11.7 million per plan and \$17 541 per member. This compares with total termination liabilities of approximately \$5.5 billion, an average per plan of about \$10.9 million, and an average of \$16 362 per member. It should be noted that termination liabilities have been overstated. The reason for this is that plans which have a solvency ratio greater than one do not show the amount of termination liabilities when their cost certificates are filed. In these cases, termination liabilities have been assumed to be equal to the lesser of going concern liabilities and the market value of plan assets. Table XI provides specifics on liabilities per plan type on both ongoing and termination bases.

In comparing assets with liabilities it can be seen that on average, Alberta registered plans are fully funded on both a going concern and termination basis, however individual plans may differ significantly from the norm. The most notable exception to this is the going concern funded status of flat benefit plans, where ongoing liabilities exceed utilized assets by about \$505 million. All multi-employer pension plans are included in this group, and it should be noted that almost all of the deficit relates to the two large multi-employer plans mentioned at the beginning of this report.

UNFUNDED LIABILITIES AND SOLVENCY DEFICIENCIES

There were 194 defined benefit plans, covering 170 080 active members, with unfunded liabilities and 16 plans, covering 1 052 active members, with solvency deficiencies as of March 31, 1990. The total of these two deficits was \$669 million, with unfunded liabilities amounting to \$665 million and solvency deficiencies amounting to \$4 million. The average unfunded liability per active plan member was \$3 909.

It is significant to note that the \$16 million solvency deficiency related to the one flat benefit multi-employer pension plan highlighted in last year's report has been eliminated. As of March 31, 1990, no multi-employer pension plan had a solvency deficiency. However, \$576 million, or almost 87 percent of the total unfunded liabilities, related to 24 flat benefit plans or 12 percent of the plans with unfunded liabilities. These 24 plans, however covered 90 percent of the active members of defined benefit plans that were less than fully funded on an ongoing basis.

Table XII, on page 22, outlines unfunded liabilities and solvency deficiencies for each defined benefit plan type.

SURPLUS

As of March 31, 1990, 284 defined benefit plans showed an excess of assets over liabilities, or a surplus. These plans had a total of 130 036 members, with 90 041 being active members.

The total surplus was about \$546 million and the average surplus per plan was about \$2 million. The average amount of surplus for each active and former plan member was \$4 202. Table XIII, on page 23, provides further information on plans with surplus assets.

FUNDING AND SOLVENCY RATIOS

Tables XIV and XV, on pages 24 and 25, deal with funding and solvency ratios of defined benefit plans by both plan type and membership. There were 508 plans selected for these tables. Seventeen of the plans selected were new plans with no assets or liabilities. It is significant to note that while Table XV shows 20 percent of active members being in plans with a solvency ratio of under one, 96 percent of those members are covered by one large multi-employer pension plan whose solvency ratio is .57.

Sixty-one percent of registered defined benefit plans had a funded ratio of one or better. These plans covered 36 percent of active plan members. Eighty-seven percent of all defined benefit plans had a solvency ratio of one or more, and these plans covered 79 percent of active members. Extracting the multi-employer plans from this, 86 percent of defined benefit plans had a funded ratio of one or more, and 96 percent had a solvency ratio of at least one.

Tables XVI and XVII, on pages 26 and 27, relate specifically to funding and solvency ratios for multi-employer pension plans. There were 28 multi-employer defined benefit pension plans registered with the branch, none of which were new registrations.

Sixty percent of multi-employer pension plans had a funded ratio of one or better, however, these plans covered only 12 percent of active members of multi-employer plans. This can be explained by the funded status of the two large multi-employer plans noted at the beginning of this report. Only one multi-employer plan had a solvency ratio of under one, but this plan covered 30 percent of the total active members of multi-employer plans.

For additional figures relating to funding and solvency ratios, please refer to the Appendix. It should be noted that the tables in the Appendix surveyed all 508 defined benefit plans, however, the data outlined does not include the 16 new plans with no assets and liabilities.

4. ACTUARIAL ASSUMPTIONS

Tables XVIII through XXV summarize the actuarial assumptions used for the 508 defined benefit plans supervised by the branch as of March 31, 1990. It should be noted that four of these plans were composite plans that had no defined benefits at the time of review. There was, therefore, no data for these plans.

METHOD OF VALUING LIABILITIES

The most common actuarial valuation method used for determining ongoing plan liabilities was the accrued, or unit credit method, accounting for 74 percent of the defined benefit plans. As can be seen in Table XVIII, on page 30, all but four career average plans used this method. The next most common method was the attained age method. The other methods noted in Table XVII were frozen initial liability methods. Table XVII provides a breakdown of methods used on a plan type basis, and as a percentage of plans.

VALUE OF ASSETS

The most popular method used to determine the actuarial value of the assets of a pension plan was based on market value of plan assets. A total of 55 percent of plans used straight market value, with another 19 percent of plans using an adjusted market value. This held true for all plan types including flat benefit plans. Previously, the majority of flat benefit plans had used book or adjusted book value. Table XIX, on page 31, summarizes utilized values by plan type and as a percentage of plans. The 11 plans using a method noted as other, used either an average of book and market, or valued fixed income investments at book and equities at market value.

MORTALITY TABLES AND WITHDRAWAL RATES

Over one half of defined benefit plans used the 1983 Group Annuity Mortality Table, or some variation of it. As Table XX, on page 32, shows, most of the remaining plans used the 1971 Group Annuity Table or an adjusted version of it. Only seven percent of the plans surveyed used any other tables. These included 17 plans using sample rates, seven using the 1951 Group Annuity Table or an adjusted version of it, five using the 1965 Group Annuity Table, one using the 1963 Group Annuity Table, and one using the 1949 Group Annuity Table.

There was an almost even split between those plans using withdrawal rate assumptions and those not, 49 percent versus 51 percent. This even split was also present by type of plan, except in the case of flat benefit plans, where 74 percent of the plans used a withdrawal rate assumption. Table XXI, on page 32, illustrates the withdrawal rate assumptions.

INTEREST AND SALARY ASSUMPTIONS

Table XXII, on page 33, provides a breakdown of the long term or ultimate rate of interest assumption used for the 508 defined benefit plans surveyed. The vast majority, 79 percent, of plans used a long term interest assumption of between six and seven and one half percent. There has, however been a slight increase, two percent, in plans using an eight percent interest assumption. There was one plan using an 11.6 percent assumption, however, it should be noted that this was a plan with only retired members which has been given permission to delay winding up until the unfunded liability has been amortized. The remaining 15 plans with an assumption of eight and one half percent or more were mostly significant shareholder and executive plans. The one plan with an assumption of three percent or less provided for annual pension increases based on the amount of increase in the Consumer Price Index each year.

There were 345 of the 508 plans surveyed which required a salary assumption. Table XXIII, on page 34, outlines figures in this regard. The majority of salary assumptions ranged between five and six percent. A total of 58 plans had a salary assumption of two percent or under. These were significant shareholder and executive plans where members were already at the maximum earnings level permitted under the Income Tax Act (Canada) for pension plans.

As shown in Table XXIV, on page 35, 208 plans, or 60 percent, had an interest assumption that exceeded the salary assumption by one percent or less. Sixty plans had a difference of at least three percent between their interest and salary assumptions. The plans with the higher differentials were mostly significant shareholder and executive plans which had some assumption constraints imposed by the Income Tax Act (Canada). Seventy-seven plans had a differential of between one and one quarter and two and one half percent, with only four of these having over a two percent difference. Further details on interest and salary assumptions are provided in the Appendix.

HOURS WORKED ASSUMPTIONS

The final assumption surveyed was that of the average hours worked by a member in a plan year. This assumption was used exclusively by multi-employer flat benefit plans. There were 27 plans which were required to use an hours worked assumption. The average hours worked assumption was 1 210 hours per year per plan member. Table XXV, on page 36, provides a percentage breakdown of the hours worked assumption used.
